To Whom It May Concern:

I would like to provide an enthusiastic recommendation for Dr. Michele Mehaffey, ABCC Bioinformatics Analyst at the CCR Sequencing Facility at the ATC in Gaithersburg, MD. My laboratory has requested and received pilot RNA-seq and ChIP-seq data from the Sequencing Facility as part of an investigation into the role common risk variants play in pancreatic cancer etiology. Michele and her group have been professional and efficient in providing us with the sequencing data. They have conducted initial sequence quality control as well as alignment for the data that has been exemplary. Their support has been excellent and it reflects the high quality sequence data. Based on the experience, we will seek approval to expand the scope of our investigation. We look forward to continued collaborations with the group.

Please do not hesitate to contact me for any further information,

Sincerely yours,
